

## Acrylic Doors

Acrylic cabinet doors are manufactured with the highest precision and quality, imported directly from Europe. This is the latest trend in a High Gloss look from Europe. The doors are manufactured by applying a High Gloss solid color acrylic sheet (1mm thick) over an MDF core, the back side has the matching color in matte, the edges are finished in matching 2mm PVC edging, real aluminum edging (2mm), brushed stainless steel edging (2mm) or a special PVC blend of matching color & aluminum.

These are the finest quality acrylic doors in Northern America. These cabinet doors were only offered by high end kitchen manufacturers as part of the complete kitchen, but now you have a chance to add the same quality and look to your kitchen.
